

The Future of Contextual Interfaces

📅 Oct 24, 2023 📁 Design Research

Contextual interfaces are moving beyond simply responding to screen size. The next evolution is responding to user intent and environmental signals.

When we consider the cognitive load required to navigate a traditional hierarchical menu system, it becomes clear that a flatter, search-driven, or context-aware approach is necessary for complex productivity tools.

Key pillars to explore:

1. Anticipatory actions based on time of day.
2. Content surfaces that adapt to the active category (e.g. notes vs. tasks)
